Rainmaker Simplified Activity Chart

Based on PERT and Gantt Chart Techniques

1: List all activities involved in providing your proposed solution to your target market's needs. Give each activity an identifying number.
2: Estimate the time involved to perform the activity during implementation or delivery of the solution (service/product).
3: List the ID or number of all tasks that immediately precede each activity, that MUST be completed before the current activity can proceed.
4: Identify the resource that has the capability to perform the activity, and the type of resource, whether it is operational or dynamic.

With this information, you should be able to identify the critical activities in your solution, the resources that will be required, as well as the amount of time it will take to implement the solution. If you need to develop a more detailed plan, refer to any text on PERT or Gantt charts.

#	Activity	Duration	Immediate Predecessor Activities	Resource	Resource Type
